Abstracts

An online VOC (volatile organic compounds) monitoring system is a technologically advanced environmental monitoring solution that utilizes a network of sensors, data loggers, and cloud-based software to continuously measure, record, and analyze concentrations of volatile organic compounds in real-time across various industrial, commercial, or residential settings. These systems are designed to detect a wide range of VOCs?such as benzene, formaldehyde, toluene, and xylene?which are emitted as gases from certain solids or liquids and can pose significant health risks, contribute to air pollution, and impact indoor air quality. By providing instant access to data through web interfaces or mobile applications, these systems enable proactive environmental management, regulatory compliance, and timely intervention to mitigate exposure risks, making them essential tools for industries like manufacturing, petrochemicals, healthcare, and construction, as well as for smart city initiatives and indoor air quality management in buildings.

The global Online Voc Monitoring System market size was estimated at USD 480.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
