Abstracts

Opaque Bulletproof Glass is a special type of glass product, mainly characterized by its lack of transparency, making it impossible to see objects or scenes on the other side through the glass. It is made through special processes and material combinations, usually composed of multiple layers of high-strength glass, resin, fibers and other materials. It has excellent bulletproof performance and can resist the shooting of bullets with a certain power, absorbing and dispersing the impact force of bullets, thus protecting people and objects behind the glass from gunshot damage. Opaque Bulletproof Glass is often used in special places with high requirements for safety and confidentiality and where transparent observation is not required, such as some military facilities, bank vaults, protection cabins of special vehicles, etc.

The global Opaque Bulletproof Glass market size was estimated at USD 2295.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
