Abstracts

Open close type air fryers are countertop kitchen appliances designed to cook food through rapid air circulation technology, featuring a hinged lid that allows users to easily access the cooking basket without fully removing it from the unit. This design enhances convenience during food preparation and monitoring, as the lid can be lifted and closed quickly, minimizing heat loss and maintaining consistent cooking temperatures. These appliances typically include adjustable temperature controls, timers, and non-stick baskets, offering a healthier alternative to deep frying by using significantly less oil while achieving similar crispy textures. Intended for home use, they cater to health-conscious consumers, busy families, and individuals seeking efficient, versatile cooking methods for tasks ranging from reheating leftovers to preparing full meals.
