Abstracts

Open end spinning machines, also known as rotor spinning machines, are industrial textile manufacturing equipment used to convert raw fibers such as cotton, polyester, or blends directly into yarn without the need for roving frames, significantly shortening the traditional spinning process. These machines operate by feeding sliver into a high-speed rotating rotor where centrifugal force separates, drafts, and twists the fibers into yarn, which is then wound onto bobbins. Offering advantages like higher production speeds, lower labor costs, and suitability for coarser yarn counts, open end spinning is particularly dominant in the production of denim, towels, and industrial fabrics, though it is less suitable for fine or high-strength yarns compared to ring spinning.

The global Open End Spinning Machine market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Open End Spinning Machine market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
