Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Open Fiber Laser Cutting Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of open fiber laser cutting machines reached 1,720 units, with an average selling price of US\$450,000. Open fiber laser cutting machines are laser cutting equipment that does not require an enclosure and is capable of large-format processing. They are commonly used for cutting steel structures, wind turbine towers, shipbuilding plates, bridge construction, and large machinery casings. Their core components include a high-power fiber laser, a galvanometer scanner, a long-stroke motion platform, an auxiliary gas system, and control software. Upstream raw materials and components include high-power laser modules, galvanometer scanner heads, high-precision linear guides and servo drives, electronic control boards, and dust protection structures. Representative suppliers include IPG Photonics, II-VI, THK, Mitsubishi Electric, and Schneider Electric. Downstream customers include steel structure manufacturers, wind turbine equipment manufacturers, rail transit manufacturers, and bridge and construction machinery manufacturers, including Baosteel, CRRC, Sany Heavy Industry, and Zhangpu Heavy Industry. Major manufacturers have an annual production capacity of approximately 250 units per line, with a total capacity of approximately 2,500 units. The industry's average gross profit margin is 32%-38%. Downstream consumption is driven by steel structure processing, accounting for approximately 40%, wind turbine tower plate processing, 25%, shipbuilding and bridge manufacturing, and 15% for other large machinery. In terms of upstream material consumption, high-power laser and scanner consumables account for approximately 15%-20% based on the operating volume of each device. Consumables for optical lenses, beam path components, and auxiliary gas systems

also contribute a significant portion. Future development focuses on achieving higher power (>100kW) cutting capabilities, modular open architectures, AI real-time monitoring, cloud-based process optimization integration, and integration with robotic handling systems and integrated flexible manufacturing systems to improve the efficiency and intelligence of large-scale plate cutting.

The global Open Fiber Laser Cutting Machine market size was estimated at USD 774.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
