Report Overview:

Open MRI systems were designed specifically to help address the comfort of patients. Instead of a cylindrically shaped system that encloses the patient's entire body, an open MRI system is designed in a way that looks like a donut hovering above the patient, with the sides of the system open. The magnets are positioned above the patient and below the patient instead of all around them like in a closed MRI system.

The Global Open MRI Systems Market Size was estimated at USD 855.40 million in 2023 and is projected to reach USD 1057.62 million by 2029, exhibiting a CAGR of 3.60% during the forecast period.
