Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Open Net Structure Abrasive competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of open net structure abrasives will reach approximately 260 million pieces, with an average price of approximately US\$0.86, product gross profit margin is 24%. Open net structure abrasives are a type of high-performance flexible abrasive with an open fiber mesh structure. The sand particles are evenly bonded to the mesh substrate via resin, enabling efficient dust removal, wear resistance, and anti-clogging during the grinding process. They are commonly used in applications such as wood sanding, car refinishing, metal polishing, and coating. Compared to traditional sandpaper, dust-free sanding net abrasives offer higher processing efficiency, longer lifespan, and can be used in conjunction with vacuum systems to significantly reduce dust pollution. Their upstream supply relies on the production and supply of abrasive particles (such as aluminum oxide and silicon carbide), fiber mesh substrates, and resin binders, raw material costs account for 59%. Their downstream applications are widely used in furniture manufacturing, car refinishing, architectural decoration, metal processing, and home DIY markets. Mirka, with its automated production lines, boasts an annual production capacity of 60 million abrasives, widely supplying the European woodworking and furniture markets; 3M, with an annual production capacity of approximately 72 million abrasives, serves the global automotive aftermarket and industrial markets.

The global Open Net Structure Abrasive market size was estimated at USD 223.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
