### Report Overview

The Open Tunnel Boring Machine is a type of tunneling equipment used to excavate tunnels in soft ground or loose soils. Unlike other tunnel boring machines that operate within a closed cutterhead, the Open TBM has an open-faced cutterhead that allows for continuous excavation and removal of the soil. As the machine moves forward, it uses cutting tools to break the soil, and then the excavated material is transported through a conveyor belt or auger system to the surface. This method is suitable for tunnels with minimal groundwater or stable soil conditions. Open TBMs are commonly used in utility installations, sewer construction, and small-scale tunneling projects.
