The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Open Type Current Transformer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Open type current transformer is a special type of current transformer designed to allow wires to freely pass through the opening of the transformer, allowing for current measurement without disconnecting the circuit. This design makes the installation and maintenance of open-ended transformers very convenient, especially suitable for existing power systems, as they can be installed and replaced without power outages. Open type current transformer is an electrical equipment widely used in power systems, whose main function is to convert large current into small current for measurement and protection. Compared with traditional closed-end current transformers, open-ended current transformers have many special characteristics and advantages, which have made them widely used in power systems. In the power system, it is widely used for current measurement and protection of power lines. It can accurately measure the current in power lines and promptly detect and handle faults, ensuring the safe and stable operation of the power system. In industrial control systems, it is widely used for current measurement and protection of various electrical equipment. It can monitor the current status of electrical equipment in real time to ensure the safe operation of the equipment. In energy management systems, it is widely used for monitoring and managing electricity consumption. It can accurately measure electricity consumption, help users optimize their electricity consumption plans, and reduce electricity costs. It can also be applied to other fields that require current measurement and protection, such as power systems in building electrical, transportation, petrochemical and other industries.

The global Open Type Current Transformer market size was estimated at USD 753.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
