Abstracts

Open Water Swim Buoy is a safety device designed for swimmers in open water environments such as oceans, lakes, rivers, or any body of water away from the safety of a pool. It is a brightly colored, inflatable buoy typically attached to the swimmer's waist via a leash, allowing the swimmer to carry it behind them while swimming. The primary function of the buoy is to increase the swimmer's visibility to other water users, such as boats, jet skis, or other swimmers, especially in large or crowded bodies of water where visibility may be limited.The buoy also serves as a floating support device, providing a place for swimmers to rest if they become fatigued or need to catch their breath. Many models are designed with an airtight, waterproof compartment where swimmers can store personal items like keys, phones, or snacks, ensuring the items stay dry and secure. In addition to its visibility and storage functions, the buoy can also act as a signal marker in emergency situations, alerting rescuers to the swimmer's location.

The global Open Water Swim Buoy market size was estimated at USD 347.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
