Abstracts

Opening trim weatherstrips are specialized automotive sealing components designed to prevent water, dust, noise, and wind from entering the vehicle cabin through gaps around doors, windows, trunks, and hoods. These parts are typically made from durable, flexible materials such as EPDM rubber, thermoplastic elastomers (TPE), or silicone, and often incorporate reinforcing elements like metal or plastic clips for structural integrity and secure attachment to vehicle body panels. Their design must account for factors such as thermal expansion, UV resistance, friction tolerance, and compatibility with adjacent components to ensure long-term performance, occupant comfort, and compliance with automotive safety and quality standards.
