In 2024, global Operating Room Infusion Warmer production reached approximately 80 k units, with an average global market price of around US\$ 2073 per unit. An operating room infusion warmer is a medical device designed to heat intravenous fluids, blood, and blood products to body temperature during surgical procedures. Its purpose is to prevent perioperative hypothermia, maintain hemodynamic stability, and reduce the risk of complications associated with the infusion of cold fluids, such as cardiac stress or coagulopathy. These devices are widely used in operating rooms for major surgeries, trauma interventions, and procedures requiring large-volume fluid replacement. The upstream supply chain includes suppliers of heating elements, temperature sensors, infusion lines, medical-grade plastics, and electronic control units. Midstream consists of medical device manufacturers that design, assemble, and validate operating room infusion warmers under strict safety and regulatory standards. Downstream, the products are distributed via hospital procurement systems, surgical equipment distributors, and medical technology providers, ultimately serving operating rooms, trauma centers, surgical wards, and emergency departments.

The global Operating Room Infusion Warmer market size was estimated at USD 167.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
