Abstracts

Operating Room Management Software is a digital management platform specifically designed for operating room operations. Its core objective is to achieve refined management of the entire surgical process through information technology. Centered on surgical scheduling, the system integrates resources such as patient information, medical staff, medical equipment, surgical instruments, and consumables, covering all stages from pre-operative to post-operative. Specific functions include intelligent scheduling, personnel qualification management, anesthesia management, instrument inventory and traceability, real-time monitoring of surgical progress, consumable inventory management, and cost accounting. This system effectively improves operating room turnover, optimizes resource allocation, strengthens infection control and compliance management, and provides data-driven decision support for hospital administrators, ultimately achieving a comprehensive improvement in operating room safety, efficiency, and effectiveness. The global operating room management software market exhibits significant regional differences. North America dominates, thanks to stringent healthcare regulations, early technology adoption, and high hospital budgets. The European market is mature, with balanced development across countries, emphasizing data interoperability and standardization. The Asia-Pacific region is experiencing the fastest growth, driven by expanding healthcare infrastructure, policy support, and rising surgical volumes; China and India are key markets. Latin America and the Middle East and Africa have lower penetration rates but significant potential; growth is limited by funding and IT infrastructure, and they are gradually breaking through with cloud solutions. Overall, technology adoption and healthcare digitalization are common trends, but development paths and maturity vary depending on regional economies and healthcare policies.

The global Operating Room Management Software market size was estimated at USD
