Report Overview

The Operative Fiber Laser Knife is a medical tool specifically designed for surgical procedures, particularly in minimally invasive surgeries. It utilizes a fiber laser technology to precisely cut or coagulate tissues during the operation. The laser emits a concentrated beam of light through a flexible fiber optic cable, which is controlled by the surgeon. The laser beam interacts with the tissue, vaporizing or sealing it, reducing bleeding and promoting faster healing. The fiber optic nature of the knife allows for better maneuverability in hard-to-reach areas and enables precise and controlled incisions, making it a valuable tool for delicate and complex surgeries.
