Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ophthalmic Scanning Biometer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The ophthalmic sweeping biometer is a high-precision non-invasive measurement device based on the principle of optical coherence tomography (OCT). It uses the swept-source technology to construct a high-resolution structural image of the eye tissue by emitting a broadband scanning laser and receiving the reflected signal, thereby realizing the rapid measurement of multiple key parameters such as axial length, corneal thickness, anterior chamber depth, lens thickness, vitreous length, etc. Compared with traditional ultrasonic biometry methods (such as A-ultrasound), the swept-source biometer has higher resolution, better repeatability and non-contact measurement advantages. It is widely used in scenarios such as intraocular lens power calculation before cataract surgery, ophthalmic refractive surgery planning, ocular anatomical structure analysis and disease screening. It is an important and indispensable equipment for modern ophthalmic precision diagnosis and treatment.

The global Ophthalmic Scanning Biometer market size was estimated at USD 398.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Ophthalmic Scanning Biometer market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
