Abstracts

Optical bonding service refers to the industrial process of laminating a display panel, such as an LCD or OLED screen, directly to a protective cover glass or touch sensor using a specialized optically clear adhesive (OCA) or resin, eliminating the air gap that typically exists between these layers to enhance optical performance, durability, and functionality in demanding environments. This technique significantly reduces internal reflection, improves contrast and readability in high-ambient light conditions, strengthens the display assembly against physical shocks and vibrations, and provides better resistance to moisture, dust, and temperature fluctuations, making it essential for applications where reliability and visual clarity are critical, such as in automotive displays, medical equipment, industrial control panels, military devices, and outdoor digital signage.

The global Optical Bonding Service market size was estimated at USD 420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.15% during the forecast period.
