Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Optical Brightener for Polyester competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Optical Brightener for Polyester is a type of fluorescent dye specially used for polyester (polyester) fibers and their blended fabrics. It absorbs ultraviolet light and emits blue-violet fluorescence to neutralize the natural yellow light of polyester, achieving an optical whitening effect of "whitening without color cast". Its mechanism of action is physical color complementation rather than chemical reaction, so it does not damage the fiber and has the characteristics of high temperature resistance, acid and alkali resistance, etc.

The global Optical Brightener for Polyester market size was estimated at USD 372.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
