## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Optical Brightener FP-127 competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fluorescent brightener FP-127 belongs to the diphenylethylene-biphenyl class of fluorescent agents. It absorbs ultraviolet light and then emits blue light, complementing the yellowish color. It typically appears as a pale yellow to yellow-green powder. It has good compatibility with thermoplastics and exhibits excellent heat and light resistance. A small addition can significantly enhance whiteness and brightness. Global production in 2024 is expected to be approximately 5,300 tons, with an average selling price of \$9,000 per ton. The main raw materials for the fluorescent brightener FP-127 are o-anisaldehyde and triethyl phosphite. Triethyl phosphite is a typical organophosphine compound, widely used in HWE reactions and a key raw material for the synthesis of fluorescent brighteners. Global manufacturers include Lanxess, Eastman, and Shandong Yarong Chemical. In downstream applications, FP-127 is primarily used to whiten and brighten thermoplastics such as PVC, PS, and ABS, significantly improving the product's appearance and brightness, enhancing its market competitiveness. The fluorescent brightener FP-127 is expected to maintain rapid growth in the high-end and engineering plastics sectors.

The global Optical Brightener FP-127 market size was estimated at USD 47.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
