Report Overview

An optical cross-connect (OXC) is a device used by telecommunications carriers to switch high-speed optical signals in a fiber optic network, such as an optical mesh network.

OXC (Optical Cross Connect), a more flexible all-optical switching scheduling method. Compared with the traditional ROADM optical switching method based on separate boards + fiber jumpers between boards, OXC uses integrated interconnection to construct an all-optical switching resource pool, which achieves a highly integrated, '0' fiber jumper all-optical switching, effectively avoiding artificial Errors in fiber jump operations have improved the exchange efficiency of large-particle services.
