Report Overview:

Optical encoders have been the popular choice in the motion control market for many years. They are comprised of an LED light source (typically infrared) and photodetectors placed on opposite sides of an encoder disk. This disk is constructed of plastic or glass and contains a series of alternating transparent and opaque lines or slots. During the rotation of the disk, the LED light path is interrupted by the alternating lines or slots on the disk, which in turn produces the typical square wave A & B quadrature pulses used to determine shaft rotation and speed.

The Global Optical Encoder Ics Market Size was estimated at USD 240.52 million in 2023 and is projected to reach USD 352.94 million by 2029, exhibiting a CAGR of 6.60% during the forecast period.
