Report Overview

Optical fiber identifiers are designed to non-invasively identify continuous-wave signals in fiber optic cables. They are low cost, hand-held tools that identify signals in single-mode fiber without interrupting service or damaging the fiber. Optical fiber identifiers eliminate the need to open the fiber at the splice point for identification, eliminating the probability of interrupting service. Suppliers are located around the world and adhere to a variety of quality standards for optical fibers and optical fiber indentifiers. For example, both the International Telecommunications Union (ITU) and the International Electrotechnical Commission (IEC) have incorporated reduced water-peak requirements into fiber and cable specifications.
