Report Overview

Optical sorting (sometimes called digital sorting) is the automated process of sorting solid products using cameras and/or lasers. Optical sorters are in widespread use in the food industry worldwide, with the highest adoption in processing harvested foods such as potatoes, fruits, vegetables and nuts where it achieves non-destructive, 100 percent inspection in-line at full production volumes. The technology is also used in pharmaceutical manufacturing and nutraceutical manufacturing, tobacco processing, waste recycling and other industries. Compared to manual sorting, which is subjective and inconsistent, optical sorting helps improve product quality, maximize throughput and increase yields while reducing labor costs.

The global Optical Food Sorting Machines market size was estimated at USD 582.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
