## Abstracts

An Optical Frequency Comb Generator is simply a mode-locked laser that is frequency and phase locked. This optical frequency comb laser has strictly equal frequency intervals in the frequency domain, similar to the teeth of a comb, so it is called an optical frequency comb (Optical frequency comb), abbreviated as optical frequency comb or optical comb. Optical frequency comb is another major breakthrough in the field of laser technology after the advent of ultra-short pulse laser. Optical frequency combs are produced by "mode-locked lasers", a new type of laser light source with ultrashort pulses (on the order of femtoseconds). With the rapid development of optical communication technology, OFC has attracted more and more scholars' attention due to its wide application in optical arbitrary waveform generation, multi-wavelength ultrashort pulse generation and dense wavelength division multiplexing. The Optical Frequency Comb Generator is a crucial optical tool that has found widespread applications in research, telecommunications, and manufacturing. The market size continues to grow, driven by increasing demand, particularly in fields such as fiber optics communication, spectral analysis, and precision measurement. Its highly precise frequency measurement capabilities make it indispensable in areas like scientific research, satellite navigation systems, weather forecasting, and medical imaging. In the future, optical frequency comb generators are expected to further drive technological innovation, miniaturize equipment, enhance performance, and expand into more domains such as quantum computing and biomedical research, thereby bringing forth more cutting-edge applications and business opportunities across industries.

The global Optical Frequency Comb Generator market size was estimated at USD 59.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
