Report Overview

Optical frequency domain reflectometry (OFDR) is a specialised technology for analysing optical light paths and reflection characteristics in optical fibres and components. Unlike OTDR, OFDR operates in the frequency domain with continuous wave (CW) light sources, allowing for higher signal-to-noise ratios. A tuneable laser source sweeps over a specific wavelength band in a typical OFDR system (e.g. 1535nm-1565nm). The light is then transmitted through a fibre and interfered with by a reference arm. The spatial distribution of the reflected light is calculated using the Fourier transformation of the resulting signal.

The global Optical Frequency Domain Reflectometry market size was estimated at USD 275 million in 2023 and is projected to reach USD 468.57 million by 2032, exhibiting a CAGR of 6.10% during the forecast period.

North America Optical Frequency Domain Reflectometry market size was estimated at USD 79.35 million in 2023, at a CAGR of 5.23% during the forecast period of 2024 through 2032.
