Abstracts

Optical interconnect systems are advanced data transmission solutions that utilize optical fiber technology to facilitate high-speed, high-bandwidth communication between components within data centers, high-performance computing environments, telecommunications networks, and enterprise systems; these systems replace or augment traditional copper-based interconnects by converting electrical signals into light pulses, which are transmitted through fiber optic cables and then reconverted back into electrical signals at the destination, enabling significantly faster data transfer rates, reduced latency, lower power consumption, and immunity to electromagnetic interference, making them essential for supporting the exponential growth in data traffic driven by cloud computing, 5G deployment, artificial intelligence, and the Internet of Things.

The global Optical Interconnect System market size was estimated at USD 4896.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 13.45% during the forecast period.
