Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Optical Line Protection (OLP) Card competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The OLP optical line protection card is a modular card that plugs into the optical transmission system chassis. It's designed to quickly switch to a backup optical path when a failure occurs on the primary optical path, ensuring communication continuity. Typical sales volume for this product is estimated at 150,000 units in 2024, with a typical average unit price of \$450 in 2024. Typical single-line production capacity is estimated at 3,000 units per year. Upstream and downstream companies primarily focus on optical switch and device manufacturing, FPGA and high-speed transceiver chip supply, PCB and electronic component manufacturers, heat sink and machined parts manufacturing, as well as system integrators and telecom operators. This product has a typical gross profit margin of approximately 32%. Typical upstream material consumption for this product is one optical switch chip, one control FPGA chip, two high-speed transceiver interface chips, one PCB, and several electronic passive components. The card weighs 35 grams, with aluminum heat sinks weighing approximately 0.3 kilograms, and the front panel and fasteners weighing approximately 0.2 kilograms. The firmware and software development time is approximately 20 man-hours. An example of downstream consumption for a single product is: 12 fiber cores can be protected, occupying one chassis slot, and operating power consumption of approximately 8 watts. An example of the product cost structure is: material costs account for 58%, manufacturing labor and indirect manufacturing costs account for 15%, R&D and testing account for 10%, packaging, transportation and sales account for 9%, administrative expenses account for 4%, and taxes and other expenses account for 4%. Products are categorized by parameters, including protection methods such as 1+1

automatic switching and 1-to-N protection, capacity categories such as 12-channel, 24-channel, and 48-channel, form categories such as plug-in and modular, interface types such as LC and SC interfaces, and reliability and redundancy levels such as standard and high reliability.
