Abstracts

The optical line system is a communication system that uses optical fiber as a transmission medium to achieve high-speed, large-capacity signal transmission. It achieves long-distance information transmission by having the optical signal emitted by the laser reflect multiple times on the inner wall of the optical fiber. The system stands out among many communication systems for its high bandwidth, low loss, strong anti-interference ability and fast transmission speed, and provides strong support for modern information transmission. The optical fiber line system also has the advantages of small size, light weight, easy laying and maintenance, which greatly improves the reliability and efficiency of communication. At the same time, its long service life and low cost make it an important choice in the current field of information transmission.

The global Optical Line System market size was estimated at USD 901.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
