Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Optical Mold competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Optical Mold refers to a precision mold used to form or shape optical components such as lenses, prisms, or light guides. These molds must meet extremely high standards of surface quality, dimensional accuracy, and material compatibility, as they directly impact the optical performance of the final product. They are commonly made from materials like hardened steel, nickel alloys, or ceramics and are used in processes like injection molding, compression molding, or precision glass molding. With the widespread application of optical equipment in the fields of communications, medical treatment, consumer electronics, etc., the requirements for precision of optical molds are getting higher and higher. Especially with the growing demand for miniaturized and integrated equipment, the requirements for mold processing accuracy and surface quality will be further improved. At present, the overall design and manufacturing level of optical precision molds in the Chinese market is still lagging behind that of countries such as Germany, the United States and Japan, and there is still a certain gap in accuracy-related indicators, service life, and yield rate. From the perspective of product sources, most of the optical precision molds in the Chinese market are self-produced and self-sold. Leading domestic manufacturers have entered the supply chains of companies such as Sunny Optical and Goertek Optics. Although some ultra-precision optical molds rely on imports, overall, the precision optical molds in the Chinese market are in a net export state.

The global Optical Mold market size was estimated at USD 426.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the

forecast period.
