Abstracts

An Optical Network Unit (ONU) is a critical customer-premises equipment device in fiber-optic communication systems, specifically within passive optical networks (PONs), which serves as the endpoint interface between the service provider's optical distribution network and the end-user's local area network. It functions by converting optical signals transmitted via fiber into electrical signals for distribution to connected devices?such as computers, phones, or televisions?while also performing reverse signal conversion for upstream communication. ONUs are integral to Fiber-to-the-Home (FTTH), Fiber-to-the-Building (FTTB), and similar architectures, enabling high-speed data, voice, and video services with features often including multiple Ethernet ports, VoIP support, and Wi-Fi capabilities. Their design prioritizes reliability, interoperability with optical line terminals (OLTs), and compliance with standards like GPON, EPON, or XGS-PON, depending on regional and technological requirements.

The global Optical Network Unit(Onu) market size was estimated at USD 2600.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
