Report Overview

The optical power meter is a type of fiber optics test equipment used to measure the electricity in optical networks. The optical power meter is consist of calibrated sensor, display, and measuring amplifier. It serves as a convenient tool for manufacture, research & development, and maintenance of equipment incorporated with laser light sources. There are two groups optical power meters namely thermal receivers, and photodetectors. Thermal receivers have a wide wavelength range coupled with flat response. On the other hand, photodetectors can measure power levels as low as 1pW, has stronger wavelength dependence, no self-calibration is required, and high sensitivity. Optical power meter has an excellent linearity, homogeneity, full power range, profound reflections, low polarization dependence, and compatibility with different types of fiber.
