Photolithographic contact correction (OPC) software is a tool used in the semiconductor manufacturing process. It is mainly used to correct photolithographic patterns to solve problems such as chip size deviation and shape distortion caused by the limitation of photolithography process. Photolithography is an important step in semiconductor manufacturing used to transfer pattern patterns from chip designs onto silicon wafers. However, due to limitations of optical phenomena and physical effects, the photolithography process can cause some deviations in shape and size. These deviations may affect the chip's performance and functionality. OPC software automatically performs pattern correction and optimization by analyzing lithographic patterns and optical effects. It can fine-tune and optimize chip designs based on specific lithography process parameters and device characteristics. The goal of the revision is to achieve more accurate, stable and consistent chip manufacturing.
