Abstracts

Optical splitter modules are passive fiber optic devices that divide an input optical signal into multiple output signals, enabling the distribution of data, voice, and video services across fiber-to-the-home (FTTH), passive optical networks (PON), and other telecommunications infrastructures. These modules come in various configurations, such as PLC (Planar Lightwave Circuit) and FBT (Fused Biconical Taper) splitters, with common split ratios like 1x4, 1x8, 1x16, or 1x32, and are designed for deployment in environments ranging from central offices and data centers to outdoor enclosures. Key performance metrics include insertion loss, uniformity, polarization-dependent loss, and return loss, while form factors may include bare fiber, rack-mounted, or standalone box-type modules to suit different installation requirements.

The global Optical Splitter Modules market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
