## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Optical Tunable Filters competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Optical Tunable Filters are devices that selectively transmit light within a specific wavelength range while blocking others, with the ability to dynamically adjust the transmitted wavelength in real time. They use technologies such as liquid crystal, acousto-optic, or Fabry-Pérot interferometry to achieve tunability, allowing precise control over spectral filtering without the need for mechanical filter changes. Optical tunable filters are widely used in applications like spectroscopy, hyperspectral imaging, optical communication, biomedical diagnostics, and laser tuning, where flexible and accurate wavelength selection is essential.
