Report Overview

Optically Clear Adhesive (OCA) can be considered a special double-sided adhesive with optical transparency. It is primarily used in the touch display field as a bonding agent between different components. The OCA optical adhesive industry chain includes 'raw materials ? coating & die-cutting ? touch display module ? end device.' The upstream raw materials of OCA optical adhesive include adhesives and film materials. The downstream market of OCA optical adhesive is mainly for touch display module manufacturers. Touch display module manufacturers use OCA optical adhesive in components such as panels, polarizers, touch screens, e-paper, and optical lenses. Ultimately, these components are used in end products such as smartphones, tablets, wearable devices, and automotive displays. The downstream market for OCA optical adhesive is expected to steadily recover in 2024, with markets such as flexible OLEDs and automotive displays expected to generate new demand. Compared to LCDs and rigid OLEDs, flexible OLEDs have different performance requirements for OCA optical adhesives, such as increased requirements for dynamic and static folding performance. Therefore, the value of OCA optical adhesives required for flexible OLEDs may be higher. Furthermore, automotive touchscreens are expected to become a growing market for OCA optical adhesives. As vehicles become increasingly intelligent, electric, and internet-enabled, we believe demand for automotive touchscreens is expected to continue to grow. This, coupled with the trend toward larger screens, is expected to drive demand for OCA optical adhesives.

The global Optically Clear Adhesive(OCA) market size was estimated at USD XX million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of XX% during the forecast period.
