Abstracts

Optical Flat-Top Converters are specialized optical devices used to shape and manipulate laser beams, typically converting a Gaussian beam profile into a flat-top beam profile. In other words, these converters transform the natural bell-shaped intensity distribution of a laser beam into a flat, uniform intensity profile across the entire beam cross-section. This can be highly beneficial in various applications where a uniform light distribution is required for more efficient or uniform processing. The primary purpose of an optical flat-top converter is to improve the uniformity of the laser beam, which is crucial in applications such as material processing, laser cutting, surface treatment, medical treatments, and optical testing.
