Report Overview

Opto-Electronic Oscillators (OEO) is a microwave photonic system that uses optical energy storage elements with high quality factor to generate microwave signals with ultra-low phase noise. Photoelectric oscillators are based on converting continuous light energy from a pumped laser into radio frequency (RF), microwave, or millimeter wave signals. OEO is characterized by very high quality factor (Q) and stability, as well as other functional characteristics that electronic oscillators are not easy to achieve. Its unique behavior results from the use of electro-optical (E/O) and photonic components, which are typically characterized by high efficiency, high speed, and low dispersion in the microwave frequency range.
