Abstracts

Optoelectronic analog night vision devices are optoelectronic devices which produce an image quite similar to the one you see with your eyes, just with other colors. Night vision devices amplify the rest light in the night with the help of a photocathode and an image intensifier tube, so you get a brighter image for observing at night. These night vision devices operate in the visible and also near-infrared spectrum, while thermal devices operate only in the infrared spectrum. Night vision devices provide soldiers with color images in the low-light environment of the battlefield. These devices have also become popular with wildfire researchers in recent years, which is expected to drive more demand for such devices. Feasibility of technologies and applications such as head-mounted night vision goggles, coupled with reasonable cost, is driving the demand. With rapid advances in thermal imaging and infrared technologies, optics manufacturers are enhancing their products to compete in high-demand segments such as night vision equipment. Wearable night vision devices, such as Enhanced Night Vision Goggles (ENVG), which incorporate thermal imaging into their design, are on the rise as technology rapidly advances. Helmet visors, cameras and other thermal devices have been at the forefront of the market. Nonetheless, night vision goggles are expected to be an application to watch as the market develops.

The global Optoelectronic Analog Night Vision Devices market size was estimated at USD 4879.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
