Abstracts

Optoelectronic laser distance sensors are devices that use a combination of optical and electronic technologies to accurately measure distances or ranges between the sensor and a target object using laser light. These sensors are commonly used in various applications that require precise distance measurements, such as industrial automation, robotics, manufacturing, construction, and more. They offer advantages over traditional measurement methods, as they are non-contact, fast, and provide high accuracy and repeatability. At present, Optoelectronic Laser Distance Sensors have been widely used in the automotive industry, aerospace and military, industrial manufacturing, electronics and photovoltaics. The main production enterprises are concentrated in Europe, America and Japan. The top three companies account for more than 45% of the global sales market share. In 2022, KEYENCE will rank first in the world with a sales market share of 25.09%.
