Abstracts

Oral appliances are medical devices used to treat snoring and sleep apnea hypopnea syndrome, and belong to Class II medical devices. There are currently three commonly used oral appliances in clinical practice: tongue traction device, palatal actuator, and mandibular advancement appliance. The most commonly used one is the third type. During sleep, after patients wear oral appliances, they fix the lower jaw in an appropriate forward position through physical limitations. The genioglossus muscle drives the hyoid bone and base of the tongue to move forward, reducing the pressure of the base of the tongue on the uvula and soft palate. At the same time, it increases the tension of the soft palate and pharyngeal wall muscles in the oral and pharyngeal regions, thus expanding the narrow pharyngeal cavity and airway in the glossopharyngeal region, increasing ventilation, improving systemic oxygen supply, eliminating or reducing snoring, and improving sleep quality. The oral appliances market has maintained a rapid growth trend in the past few years and is expected to continue stable growth in the coming years. This trend is closely related to the increasing number of snoring patients, especially the aging trend and unhealthy lifestyle in developed countries, which are expected to further drive market growth. The competition in the oral appliances market is fierce, with a large number of brands and products on the market. Due to the low technological threshold, many low-quality products have emerged, making it difficult for consumers to choose suitable products. In addition, the lack of unified product standards in the market and incomplete industry supervision can easily lead to the existence of counterfeit and inferior products, which damages consumer rights. At present, the main manufacturers include VitalSleep, MolecuLight, Zyppah, AirSnore, SomnoMed and other companies. With the improvement of people's health awareness and the emphasis on sleep quality, the oral appliances market will continue to expand in the coming years. In particular, emerging markets, such as Asia and South America, although the incidence of snoring is high, the market development is

insufficient and there are broad development opportunities. By collaborating with medical institutions and sleep research institutions, the credibility and market recognition of the product can be improved.

The global Oral Appliances market size was estimated at USD 1100.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
