### Report Overview

The oral COVID-19 drug market consists of antiviral medications designed for outpatient treatment of mild to moderate COVID-19 cases, offering a convenient alternative to intravenous therapies. These drugs, such as Pfizer's Paxlovid (nirmatrelvir/ritonavir) and Merck's molnupiravir, target viral replication mechanisms. Paxlovid inhibits the SARS-CoV-2 main protease, while molnupiravir introduces errors into viral RNA. The market emerged in late 2021 amid demand for scalable treatments to reduce hospitalizations, particularly for high-risk populations. Growth drivers include global vaccination gaps, variant surges, and the need for cost-effective therapeutics in resource-limited settings. However, adoption faces challenges like stringent eligibility criteria, drug interactions (e.g., Paxlovid's ritonavir component), and cold-chain logistics for some formulations. The competitive landscape is evolving, with generics entering post-patent expiry and research ongoing for next-gen broad-spectrum antivirals. Regulatory approvals (e.g., FDA EUAs) and government stockpiling (e.g., U.S. procurement contracts) significantly influence market dynamics, while pricing pressures and equity in global access remain critical issues. Emerging variants and long COVID research could reshape future demand.

The global Oral Covid 19 Drug market size was estimated at USD 5806.38 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
