Abstracts

Oral Dose Analytical Services refers to a service in which professional institutions use a series of scientific analytical techniques and methods to conduct dose-related analytical determinations on substances ingested orally (such as drugs, nutritional supplements, food additives, etc.), and provide accurate analysis results and professional reports. This service aims to accurately evaluate key indicators such as the content, purity, active ingredient ratio, dissolution, stability, etc. of oral substances to ensure the accuracy and safety of their dosage. For example, in the process of drug research and development and production, it is necessary to determine the exact content of the drug in the oral preparation to ensure that the dosage taken by the patient can achieve both therapeutic effects and toxic side effects due to excessive dosage; for nutritional supplements, it is necessary to analyze whether the dosage of the active ingredient is in line with the product labeling and human health needs. It may also be called oral preparation dosage testing service, oral substance dosage analysis testing service, etc.

The global Oral Dose Analytical Services market size was estimated at USD 844.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
