Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Oral Flavors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of oral flavors is 25,000 tons, with an average price of US\$36,300 per ton. Oral flavors are blends of natural or synthetic flavorings specifically designed for oral care products (such as toothpaste and mouthwash). They impart a specific aroma, mouthfeel, and cooling sensation to the product. They not only improve the oral experience and mask unpleasant odors, but some ingredients also have antibacterial properties and must comply with food additive safety standards. The upstream segment of the oral flavor industry chain primarily includes flavoring ingredients, plant extracts, food-grade solvents and carriers, emulsifiers, and stabilizers. Core ingredients are natural and synthetic flavors. Upstream companies are primarily international flavor giants, such as Givaudan, Firmenich, International Flavors & Fragrances (IFF), Takasago Flavors & Fragrances, Symrise, Huabao Group, Changxiang Group, and Shanghai Xinhai Flavors & Fragrances, which possess technological advantages in raw material synthesis and flavor blending. The downstream segment primarily comprises oral care product lines for daily chemical, pharmaceutical, and fast-moving consumer goods brands, as well as e-commerce, beauty, and cosmeceutical channels. Downstream consumer preferences for "fresh breath," "comfortable flavor," and "natural and safe" attributes are key drivers, with demand for products for children and those with sensitive skin growing particularly pronounced. The industry's development trend reflects a balance between natural extracts and complex flavors. As consumer allergies and health concerns regarding chemical flavors increase, the use of natural flavors such as plant extracts, peppermint oil, tea polyphenols, and citrus extracts continues to rise. Oral flavors are expanding from single cooling flavors to include fruit, herbal, vanilla,

and floral scents, offering soothing, antibacterial, or emotionally relaxing effects. Driving factors include increasing health awareness, upgraded personal care consumption, differentiated competition in fragrance experiences, and cross-industry integration trends. Key obstacles include stringent food safety standards, the high cost of natural flavors, difficulty controlling formulation stability, and lengthy taste testing cycles, resulting in significant R&D and cost pressures for small and medium-sized enterprises. In terms of production capacity, a medium-sized oral flavor production line typically has an annual output between 800 and 2,000 tons, with a typical gross profit margin of 30% to 40%. High-end natural blends can reach over 45%, while mass-market or OEM flavors are around 25% to 30%. The primary costs come from raw materials and perfumer formula development, with natural flavor costs accounting for over 50%.

The global Oral Flavors market size was estimated at USD 905.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
