Abstracts

Oral local anesthetics are pharmaceutical agents designed to temporarily block nerve impulses in a specific area of the mouth, gums, or throat to prevent pain during dental procedures, minor oral surgeries, or treatments for conditions like mouth ulcers. These products, available in various forms such as gels, sprays, ointments, lozenges, and injectable solutions, typically contain active ingredients like benzocaine, lidocaine, or prilocaine that act on sodium channels to inhibit pain signal transmission. They are widely used by dental professionals, in clinical settings, and available over-the-counter for consumer self-administration, offering targeted, non-systemic pain relief with minimal side effects when used as directed. The market for these products is driven by the growing demand for pain management solutions, increasing dental care awareness, and advancements in formulation technologies that enhance efficacy and patient comfort.

The global Oral Local Anesthetics market size was estimated at USD 1825.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
