Abstracts

Oral mucositis is a common and debilitating inflammatory condition affecting the mucous membranes lining the oral cavity, often occurring as a side effect of chemotherapy and radiation therapy in cancer patients, characterized by symptoms such as erythema, ulceration, pain, and difficulty in swallowing or speaking, which can severely impact nutritional intake, quality of life, and treatment adherence, necessitating interventions that range from basic oral care protocols and pain management to advanced therapies like low-level laser therapy, growth factors, and barrier-forming agents aimed at preventing or healing mucosal damage. The global market for oral mucositis treatment is expanding, driven by the rising incidence of cancer, increased use of aggressive chemoradiotherapy regimens, growing awareness among healthcare providers, and the development of novel pharmaceutical and biotechnological products, although market growth is tempered by challenges such as high treatment costs, limited efficacy of some existing options, and a lack of standardized preventive protocols across clinical settings. Key players in this market include pharmaceutical companies, medical device manufacturers, and biotechnology firms focusing on both preventive and therapeutic solutions, with North America and Europe currently dominating due to advanced healthcare infrastructure and higher cancer treatment rates, while emerging economies in Asia-Pacific are expected to show significant growth due to improving healthcare access and increasing cancer burden.

The global Oral Mucositis Treatment market size was estimated at USD 560.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
