Abstracts

Oral nicotine pouches are small, discreet, smokeless tobacco products that contain nicotine and are designed to be placed in the mouth, typically between the gum and the upper lip. They are similar in appearance to snus, which is a moist, powdered smokeless tobacco product popular in some parts of the world. However, oral nicotine pouches typically come in a dry, pre-portioned format and are often flavored. Growing Popularity: Oral nicotine pouches gained popularity as an alternative to traditional tobacco products, such as cigarettes and smokeless tobacco. This was partly due to health-conscious consumers seeking less harmful nicotine delivery methods. Smokeless and Tobacco-Free: One significant trend was the development of smokeless and tobacco-free nicotine pouches. These products provided nicotine without the harmful effects of tobacco combustion, appealing to users looking for a cleaner nicotine experience. Flavor Varieties: Nicotine pouch manufacturers introduced a wide range of flavors to attract a broader customer base. These flavors included mint, citrus, berry, and more. Flavor variety played a crucial role in attracting new users. Convenience: Nicotine pouches were marketed as a convenient and discreet option for nicotine consumption. They could be used in various settings without the need for smoking or spitting, making them attractive to both smokers and non-smokers.

The global Oral Nicotine Pouches market size was estimated at USD 1663.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
