Report Overview

An orbital spaceflight (or orbital flight) is a spaceflight in which a spacecraft is placed on a trajectory where it could remain in space for at least one orbit. To do this around the Earth, it must be on a free trajectory which has an altitude at perigee (altitude at closest approach) around 80 kilometers (50 mi); this is the boundary of space as defined by NASA, the US Air Force and the FAA. The expression 'orbital spaceflight' is mostly used to distinguish from sub-orbital spaceflights, which are flights where the apogee of a spacecraft reaches space, but the perigee is too low.

The global Orbital Spaceflight market size was estimated at USD 13010 million in 2023 and is projected to reach USD 25152.88 million by 2032, exhibiting a CAGR of 7.60% during the forecast period.

North America Orbital Spaceflight market size was estimated at USD 3846.09 million in 2023, at a CAGR of 6.51% during the forecast period of 2024 through 2032.
