Abstracts

A space tug is a type of spacecraft used to transfer spaceborne cargo from one orbit to another orbit with different energy characteristics. Satellite deployment and orbit transfer are the most fundamental and important functions of space tugs. They can transport multiple satellites to different predetermined orbits simultaneously, significantly improving launch efficiency and reducing deployment costs. They can also provide refueling or orbit-raising services for satellites already in orbit, effectively extending their operational lifespan. By towing defunct satellites or other space debris to "graveyard orbits" or allowing them to burn up in a controlled reentry into the atmosphere, they help mitigate the space debris problem. High-thrust space tugs will be used in the future to tow cargo or spacecraft to deeper space destinations, such as the Moon and Mars, serving as transit points for deep space exploration. Space tug services are rapidly evolving from a concept into a highly anticipated emerging market. The entire space logistics market is experiencing rapid growth. While data on the individual market size of space tugs is still unclear, as a key component of space logistics, they demonstrate strong growth momentum. A number of companies specializing in this field have emerged globally, creating a diverse competitive landscape. With the intensive deployment of large satellite constellations (such as Starlink and OneWeb), the demand for efficient and flexible orbital access services will only increase. Services will expand from simple "tugage" to more complex "on-orbit services," including in-orbit repair, upgrades, and assembly. To support longer-distance and larger payload missions, the research and development and application of nuclear propulsion systems will become a focal point of competition among major powers. In addition to traditional national teams, commercial companies will become a key force driving technological advancement and business model innovation.

The global Orbital Tug Service(Space Tug) market size was estimated at USD 329.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.20% during the forecast period.
