Abstracts

An organic acid is an organic compound with acidic properties. The most common organic acids are the carboxylic acids, whose acidity is associated with their carboxyl group -COOH . Sulfonic acids, containing the group $\text{-SO}_2\text{OH}$, are relatively stronger acids. Alcohols, with -OH , can act as acids but they are usually very weak. The relative stability of the conjugate base of the acid determines its acidity. Other groups can [also] confer acidity, usually weakly: the thiol group -SH , the enol group, and the phenol group. In biological systems, organic compounds containing these groups are generally referred to as organic acids.

The global Organic Acid Products market size was estimated at USD 15840.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
