Abstracts

Organic coated steel (OCS) refers to steel substrates, typically galvanized or galvalume, that are coated with layers of organic materials?such as polyester, polyurethane, silicone-modified polyester, or polyvinylidene fluoride (PVDF)?to enhance durability, corrosion resistance, and aesthetic appeal. These coatings are applied through a continuous coil coating process, ensuring uniform coverage and allowing for customization in color, finish, and texture. OCS combines the structural strength of steel with the protective and decorative qualities of organic polymers, making it suitable for applications requiring both performance and visual appeal, such as architectural cladding, roofing, appliances, and automotive components. The technology enables manufacturers to produce pre-finished steel with specific functional properties?including weather resistance, UV stability, and formability?while reducing on-site painting and maintenance needs.

The global Organic Coated Steel (Ocs) market size was estimated at USD 12500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
