Abstracts

The definition of an organic coating is; a kind of coating whose main ingredients are obtained from vegetable or animal substances, or compounds that are strong in carbon. A major development trend of Organic Coatings is to develop in the direction of environmental protection and low VOCs (organic volatile compounds). Since traditional coating products contain a large amount of organic volatile compounds, which cause greater pollution to human health and the environment, future coating products will increasingly be developed in the direction of environmental protection and low VOCs. This also means that Organic Coatings will gradually replace traditional solvent-based coatings and become the mainstream of the market.

The global Organic Coatings market size was estimated at USD 945.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Organic Coatings market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
